THOR'S HAMMER

OPEN / ACTIVE

THOR'S HAMMER · M111 FORM FACTOR · 2× COMPOSITION-B CHARGE · SMART LOITER

CHARGE
2× COMP-B

FLIGHT TIME
5 MIN

FORM FACTOR
M111

SEEKER
AI CAM

WHY IT WINS

- ▶ Same external size as M111 — drops into existing grenade pouches and kit without retraining.
- ▶ DOUBLE the Composition-B charge of the system it replaces.
- ▶ 5 minutes of smart flight time — deploys rotors mid-air, finds its target, engages.
- ▶ AI targeting camera identifies valid military targets — hits movers hidden behind cover.

SPECIFICATIONS

FORM FACTOR	M111-equivalent — same external envelope and mass class
CHARGE	Composition-B · approximately 2× the fill of baseline M111
PROPULSION	Folding rotors, deployed after operator throw
FLIGHT TIME	5 minutes loiter / transit after deployment
SEEKER	AI targeting camera — object classification + track lock
EMPLOYMENT	Operator throws → rotors deploy → seeker acquires → terminal engagement
TARGET SET	Infantry behind cover · light vehicles · mover targets out of line-of-sight
CARRIAGE	Existing M111 grenade pouches and vest loadouts
TRAINING BURDEN	Minimal — throw is the same; seeker handles the hard part
COMPLIANCE	NDAA compliant · American-built

OPERATIONAL ADVANTAGES

- ▶ First significant advancement in hand-thrown grenade technology since 1968.
- ▶ Defeats the fundamental grenade problem — line-of-sight targeting — with AI after the throw.
- ▶ Hits moving targets in defilade, behind walls, or inside doorways that a static grenade cannot.
- ▶ Same carry profile as the M111 it replaces — zero impact on soldier load planning.
- ▶ Expendable price point — not a loitering munition budget; a grenade budget.
- ▶ Overmatch in every small-unit engagement where the enemy is using cover effectively.
